

Installation and Operation Instruction

The **FlowCon Green** inserts are for use with three different FlowCon valve housings, either:

- ① FlowCon A DN15-25 (1/2"-1")
- ② FlowCon AB DN15-32 (1/2"-1 1/4")
- ③ FlowCon ABV DN15-40 (1/2"-1 1/2")

Insert Setting and Installation

Prior to installing the FlowCon Green insert (supplied from factory in setting 5.0 due to calibration), the system should be properly flushed. Blank valve covers are available to be installed during flushing.

It is recommended to grease the O-rings located around the insert and headnut with silicone grease before installing the insert in the valve housing.

General Assembly Drawing FlowCon Green

- A: Valve housing
- B: Green insert
- C: Adjustment keys
- D1: P/t plug (2 pcs.)
- D2: Plug (2 pcs.)
- E: Union end connections
- F: FlowCon actuator

Figure 1

The desired flow rate is set by adjusting the insert (turn counter-clockwise to setting 1.0 and then clockwise up) with a special adjustment key. **Range is between 1.0 and 5.0.**

⚠ Do not overturn.

Scale setting is located on top of the insert. For Green.0, Green.1 and Green.2, large white digits, numbered 1 to 5, indicate full turns and red digits, numbered 0 to 9, indicate 1/10 of full turn. **For Green.1HF scale is opposite.** Here large green digits, numbered 0 to 9, indicate 1/10 of full turn and black digits, numbered 0 to 5, indicate full turn. Flow setting may be done either before or after the insert is installed in the valve housing. Once flow is set and insert is fitted in the valve housing, the required actuator may be applied. Please see specific installation instruction for selected actuator.

Accuracy: Greatest of either ±10% of controlled flow rate or ±5% of maximum flow rate.

Note 1: If used in pressure range 200-600 kPaD (29-87 psid), accuracy of -20% / +0% applies.

Note 2: If used in pressure range 400-800 kPaD (58-116 psid), accuracy of -20% / +0% applies.
